

Decision Pattern

Project Map — What matters, what doesn't, what spreads, what retains.

Core Insight

"The thing you half-knew but never saw written down."

The virus is not surprise. It is accurate articulation of something previously inarticulate. People share it because seeing it written makes them feel exposed and understood simultaneously.

What Is Necessary vs. What Is Not

NECESSARY NOW	NOT NECESSARY NOW
3-statement flow (accusation format)	User accounts / login
4 result paths (A/B/C/D)	Database or backend
Share button + clipboard copy	Onboarding flow
'Missed completely' feedback button	Mobile app
Google Form tracking	Beautiful UI / logo
GitHub Pages hosting	AI / ML integration
Key phrase above statement 1	Daily usage limits

Viral Mechanics — What Spreads

ELEMENT	WHY IT TRAVELS
Statement format (not quiz)	Avoids MBTI fatigue. Feels like forensics, not personality.
Self-selection at Statement 3	User picks the pattern that stings most. More accurate = more shareable.
Result sentence rhythm	3 beats: what you did + what you told yourself + what was actually happening.
'Missed completely' button	Makes failure useful. Signals authenticity — not optimized for vanity.
'Try a different decision'	Re-engagement hook. Pattern 5 provokes return without friction.
HN post title	'Point this at a decision you regret' — no quiz framing, instant curiosity.

Dependency Mechanics — What Retains

LAYER	MECHANISM	WHEN
Layer 1: Single visit	Result resonates. User screenshots and shares. One-time value.	Now (MVP)
Layer 2: Return visits	Pattern deepens per visit. Tags accumulate into cognitive fingerprint.	Post-HN validation
Layer 3: Prediction	System predicts blind spot before user makes next decision. Irreplaceable.	After retention proven
Layer 4: Export	Portrait exportable to successor. Judgment inheritance solved. Org memory.	Long-term / B2B

The Hypothesis Being Tested

If a tool can articulate someone's invisible cognitive pattern accurately enough to make them freeze, they will want to track it over time. That compounding self-knowledge creates switching cost. Leaving means losing access to their own memory. That dependency is the business.

The One Metric That Matters Right Now

Share button click rate. If 1 in 10 people who finish the 3 statements shares the result — the result sentences are working. If 1 in 100 — rewrite the sentences. Everything else is noise until this is proven.

Distribution Plan

CHANNEL	PURPOSE	TIMING
Hacker News Show HN	Fast brutal validation. Comments > upvotes.	Tonight / tomorrow
Reddit r/datascience	Target audience. Direct feedback.	Same day as HN
Hugging Face Spaces	Long-tail discoverability. Persistent listing.	After HN
Note.com / Zenn	Content audience from data storytelling work.	Ongoing
